
P3Web v4.9.0.0 Release Notes

11/24/2020

Recommended Browsers:

- Google Chrome 70+ (pop-ups must be permitted for the application)
- Firefox 70+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)

Supported, but Deprecated Browser:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to "off")

Server Requirements:

- .NET Framework v4.5
 - Windows Server 2008 SP2+
 - SQL Server 2008 R2+
 - IIS 7+
-

General:

What's New?

- Now supports multiple SiteIDs for Direct Link access
- Rename Item/Group in Documents, Records, Improvements, & Training
- Move Item/Group in Documents, Records, Improvements, & Training
- Delete Item/Group in Documents, Records, Improvements, & Training
- View Other Users' Action Items
- Set default search field when launching search
- General Performance enhancements

Bug Fixes:

- Action Item SHOW ME issues corrected when referencing deleted/withdrawn items.
- Direct link errors corrected.
- Search only includes direct linked folders and permitted sub-folders when not logged on.
- Various security fixes for items and folders with regard to Editing, Status Control, etc.
- Spurious document import errors captured and/or avoided.
- Document background now appears as white when viewing HTML published files.
- Action Items linked to files/records that no longer are active or deleted or withdrawn now shows an appropriate message for the user.
- Saved reports using Categories now correctly filter results.
- Event Triggers for Document status Action Items now correctly recurse through all organization entities
- An issue where events would not trigger for Action Items with long comments has been avoided.

Known Issues:

- Closing the Document Viewer window using the "Windows Close" button can suppress the deletion code of the temporary view file. Use the P3Web "Close" button on the document toolbar instead to ensure proper removal of temporary view file.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version
- Using MS Interop to open files directly from the document repository will not convert internal Para-Links to hyperlinks. Para-Links can still be accessed using the "Para-Links" button on the Document Viewer toolbar.
- Certain field types are not yet supported in P3Web and others will not be supported in future versions. For a list of types, contact Chris Reyno at creyno@interaxgrp.com.

General:

- Action Item SHOW ME button now displays a message to the user if the version of the SHOW ME item has since been deleted or Withdrawn.
- P3Web now supports Direct Links using multiple SiteIDs. Add all accepted SiteIDs to the web.config file application setting with the key of "SiteID", separated by commas and no spaces. Folders with a blank or empty Site ID will automatically be included in the Direct Links list.
- Permitted users can now **RENAME** P3Web items or groups in Documents, Records, Improvements, and Training modules. A button will appear on the P3Web toolbar when a user is permitted to rename.
- Permitted users can now **MOVE** P3Web items or groups in Documents, Records, Improvements, and Training modules. A button will appear on the P3Web toolbar when a user is permitted to move.
- Permitted users can now **DELETE** P3Web items or groups in Documents, Records, Improvements, and Training modules. A button will appear on the P3Web toolbar when a user is permitted to delete.
- "Document containing text" search has been added to the "Simple Doc Search" list of available search options.
- A fix has been applied that now avoids an error when direct links are accessed to folders where "Default Security" is unchecked and the user is not logged in.
- Potential security errors and miscalculations have been addressed when calculating permissions for the following:
 - Available folders
 - Add Items
 - Edit Items
 - Status Control
 - Rename
 - Move
 - Delete
- The Document Import utility has been redesigned to prevent errors when importing files to SSL/TLS protected remote servers.
- A new setting has been added with a key of "DefaultSearchField". This setting will force the Search dialog to open with the specified search field automatically selected. Available options are:
 - "Name" – Document/Item Name
 - "LabelName" – Document/Item Label
 - "ItemID" – Document/Item Item Version ID
 - "OrigID" – Document/Item Original ID
 - "DocText" – (Documents only) – Items Containing Text
- Search performance has been improved on the back-end database stored procedures.
- Documents published to P3Web as HTML will now display with a white background as opposed to gray.
- Saved Reports created from the Paradigm 3 client that use Categories as a filter will now correctly display results in P3Web.
- Events linked to document status changes now correctly recurse through any/all sub-entities of Organization Entities included in the recipients list of an Event.
- Events linked to Action Item completion and results will now trigger properly when comments are longer than 16 characters.
