
P3Web v4.2.0.0 Release Notes

7/16/2018

Browser Compatibility:

- Internet Explorer 10+ (pop-ups must be permitted for the application)
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge 20+ (pop-up blocker must be "off")

Server Compatibility:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+

General:

- Various performance and stability enhancements.

Documents Module:

- A new general current document report is available. Simply highlight the desired root folder and click the "Report" button on the P3Web toolbar. The report will return all current documents contained in the folder structure below the selected folder.

Improvements Module:

- Functionality has been added to allow users to assign responsibility for subsequent steps. When the user clicks "Finish Step", if the next step requires that a responsible person/entity be assigned, the interface will guide the user through the process. The current step will be completed at the end of the process.

Training Module:

- Users can now add new training records
- Users can now edit existing training records and complete requirements.

Known Issues:

Search:

- Draft/Review/Collaborate/Pending/Ready documents are not included in the standard search results. A work around would be to search by the desired status.

Improvements:

- Setting escalation Action Items for overdue steps is not yet enabled. This is also the case for the thick client and will become available as soon as the facility exists.

Records/Improvements/Training:

- Some forms designed using Style Designer may produce errors when attempting to open them. Contact Interax Support if this occurs and a small database change will be made to your system to alleviate them.
