
P3Web v4.9.1.0 Release Notes

1/22/2021

Recommended Browsers:

- Google Chrome 70+ (pop-ups must be permitted for the application)
- Firefox 70+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)

Supported, but Deprecated Browser:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to "off")

Server Requirements:

- .NET Framework v4.5
 - Windows Server 2008 SP2+
 - SQL Server 2008 R2+
 - IIS 7+
-

General:

What's New?

- Issues with item properties, accessed from Direct Links resolved
- Issues with root folder name of Action Items module resolved
- Para-Link listing no longer displays duplicate values.
- Condition that allowed non-permitted Restricted Plus Edit users to convert files to CURRENT has been avoided.

Bug Fixes:

- Issues with item properties, accessed from Direct Links resolved
- Issues with root folder name of Action Items module resolved
- Para-Link listing no longer displays duplicate values.
- Condition that allowed non-permitted Restricted Plus Edit users to convert files to CURRENT has been avoided.

Known Issues:

- Some users are reporting an error about "ambiguous column name" when attempting to view saved searches in P3Web. The cause is currently under investigation.
- Closing the Document Viewer window using the "Windows Close" button can suppress the deletion code of the temporary view file. Use the P3Web "Close" button on the document toolbar instead to ensure proper removal of temporary view file.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version
- Using MS Interop to open files directly from the document repository will not convert internal Para-Links to hyperlinks. Para-Links can still be accessed using the "Para-Links" button on the Document Viewer toolbar.
- Certain field types are not yet supported in P3Web and others will not be supported in future versions. For a list of types, contact Chris Reyno at creyno@interaxgrp.com.

General:

- Item properties, accessed from Direct Links no longer show the folder properties and correctly display the selected item properties.
- The Action Item root folder name now displays the correct information and no longer displays the root folder name of the Records module.
- A condition that could cause duplicate Para-Links to appear in the linked items list has been avoided.
- Condition that allowed non-permitted Restricted Plus Edit users to convert files to CURRENT has been avoided.
