
P3Web v4.1.0.0 Release Notes

4/12/2018

Browser Compatibility:

- Internet Explorer 10+ (pop-ups must be permitted for the application)
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge 20+ (pop-up blocker must be "off")

Server Compatibility:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+

Standard Functionality Statement:

All functionality that was available in P3Web v3.x is considered to be available in P3Web v4x. Items mentioned in these release notes should be considered to be "in addition to" the available functions from P3Web.

Graphical Interface:

- Paradigm 3 Web has a totally new look and feel! The GUI has been brought more in line with the desktop client to reduce confusion.
- A "Home" menu option is included that links to a customizable homepage. This homepage can be customized in content, and also allows for a more integrated direct-links menu.
- Direct links no longer open a pop-up dialog to view linked folders. Now the direct links are integrated into the standard interface.
- Document/Record functions (View, add, properties, etc.) are now available on a standard toolbar, located near the top of the application page.
- Items in all List Views (Documents, Records, Action Items) can now be double-clicked to open.

Action Items:

- Unread Action Items now appear in bold.
- Columns in the Action Item List View are now sortable.
- Double-click to view Action Item
- Action Item list updates instantly when completing Action Items

Documents:

- Double-click to view documents or use the “View” button on the toolbar
- Document viewer can now be resized without compromising the document view.
- PDF published Files supported.
- Document Status Control is now supported. Convert document status to Draft, Collaborate, Ready, Pending, Review, or Current. Open the document status interface by highlighting a file and clicking the “Status” button on the toolbar.
- Documents can now be checked out for editing. Select a “Draft” or “Collaborate” document version (or processing version) and click the “Edit” button. From there, you can download a local copy to your PC or another shared location to edit directly.
- Documents can now be checked-in from editing. Select a “Draft” or “Collaborate” document that is currently checked out and click the “Edit” button. From there, you can upload the draft version to the server for further action. Once the check-in is complete, the local edit file will be removed so no uncontrolled versions will remain outside of P3Web.

Records/Improvements:

- Double-click to view record
- Records can be completed or new versions opened by highlighting the selected record and clicking the new “Status” button on the toolbar.

Training:

- Double-click to view record

Search:

- The P3Web GUI has been simplified to bring it more in line with the full client search engine. The default GUI is a complete search engine that includes all fields and tabs. A configuration setting is available ([UseSimpleDocSearch](#)) that simplifies the search engine, hiding all but the “General” tab and only making searches available for the following fields in the “Documents” module:
 - Name
 - Label
 - ID/OrigID
 - Internal Text
- Can search Documents, Records, Training & Action Items

Known Issues:

Search:

- Draft/Review/Collaborate/Pending/Ready documents are not included in the standard search results. A work around would be to search by the desired status.

Documents:

- Users with administrative rights can override all role-based security.

Records/Improvements/Training:

- Some forms designed using Style Designer may produce errors when attempting to open them. Contact Interax Support if this occurs and a small database change will be made to your system to alleviate them.

Training:

- Editing of Training records is not yet enabled in v4.1.0.0.
