

P3Web v4.7.0.0 Release Notes

1/27/2020

Browser Requirements:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to “off”)
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)

Server Requirements:

- MS .NET Framework v4.5
 - Windows Server 2008 SP2+
 - SQL Server 2008 R2+
 - IIS 7+
-

General:

What's New?

- Search security enhancements
- Search result sorting
- Saved search enhancements
- Item list view security enhancements
- Folder security enhancements

Bug Fixes:

- Security fix to improve search accuracy for logged on users
- Saved Search by category now working as intended
- Saved Search list panel no longer expands past the bottom of the screen if the list of saved searches is long
- Mandatory Fields now properly fire error messages when invalid data is detected.

Known Issues:

- Closing the Document Viewer window using the Windows “close” button can suppress the view file deletion function, depending on the browser being used. Use the P3Web “Close” button on the document toolbar instead.
- FIPS compliant systems may encounter errors when authenticating. At this time the only workaround is to disable FIPS compliance on the web server running P3Web. We are examining ways to eliminate this error in a future release.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version

Search:

- Sorting of columns is now supported in the "Search" window. Click a column header to sort by that column. Click it again to sort it in the reverse order.
- Search will detect your saved sorts (if any) for all modules and automatically apply them to your search result list.
- Search security now recognizes normal and restricted users who are members of a sub-entity in the organization structure.
- Search performance has been improved.
- Saved Searches now work correctly with templates saved using categories.
- Double-click now works as intended to open an item from the saved search result.

General:

- Item List Views in the Improvements, Records and Training modules now only display permitted records to the user, reflected in the folder security settings.
- Mandatory fields now fire the correct error message and halt saving of a record in the Records, Improvements, and Training modules.
- Folder security reliability improved.
- Release notes for all versions is now available for viewing within the application. Just click the version number at the bottom right to view.
