
P3Web v4.5.0.0 Release Notes

3/12/2019

Browser Compatibility:

- Internet Explorer 10+ (pop-ups must be permitted and compatibility mode must be set to "off")
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge 20+ (pop-up blocker must be "off")
- Mobile browsers now supported!

Server Compatibility:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+
- SQL Server 2008 R2+

General:

What's New?

- Access to saved reports is now available for the Documents, Records, Improvements and Training modules.
- Clicking the "Report" button on the toolbar will produce a pop-up list of saved reports which the user can select. Reports will open in a new window.
- Windows based authentication performance and reliability has been improved.
- Edit/Status change capability now available for permitted Restricted+ users in the Documents, Improvements and Training modules. Records is still open to all users.
- Attachments can now be added to Records, Improvements and Training by permitted personnel.
- Attachment notes can now be updated in Records, Improvements and Training by permitted personnel.
- Calculated Fields are now supported in Records, Improvements and Training.
- Various performance and stability enhancements.

Bug Fixes:

- When the session times out due to inactivity, the user is now more gracefully logged out and the application refreshes to the home page. Previously an error was being generated.
- Corrected an error when sorting columns in the list view while not logged on.
- An issue when selecting items in the List View snapping back to the top of the list has been corrected. Scroll position should now be maintained after selecting an item in the main view (Documents, Records, Improvements, Training, and Action Items) and in Search results.
- Many error messages are more elegantly presented as pop-ups as opposed to a dedicated error page.

Known Issues:

- Some Date-based calculated fields return an error of an “invalid date format” when attempting to calculate. It will be rectified in a future version.
- Sort order is currently not saved whenever the group list view is refreshed. This happens when you do any of the following:
 - Select a folder
 - Open an Action Item
 - Complete an Action Item
 - Update a record in Records, Training or Improvements
 - Change a document status
 - Click “GO THERE” from any location

Action Items:

- Clicking GO THERE from an Action Item to an item that is not located in a permitted folder now produces the same error message pop up as in the client.

Documents:

- Evidence is now supported in P3Web!
- All convert to current events are now supported by P3Web: o Convert to Current o Major Version Change o Medium Version Change or Minor Version Change
- Document Check-Out/Check-in performance and reliability has been improved.
- A Database error that could occur when returning documents for the List View has been rectified.
- Simple Document control (e-Forms) is now supported for folders with this option set.

Training:

- When adding a new Training record, the “Name” dropdown now correctly alerts when validation finds a name has not been selected from the list.

Search:

- Clicking “Go There” on a selected item will now correctly calculate user security and not produce a security error if the user is permitted.
- Page alignment issues after clicking “Search” in IE have been corrected.
