
P3Web v4.3.0.0 Release Notes

11/28/2018

Browser Compatibility:

- Internet Explorer 10+ (pop-ups must be permitted and compatibility mode must be set to "off")
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge 20+ (pop-up blocker must be "off")
- No mobile browser compatibility (Coming Soon!)

Server Compatibility:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+

General:

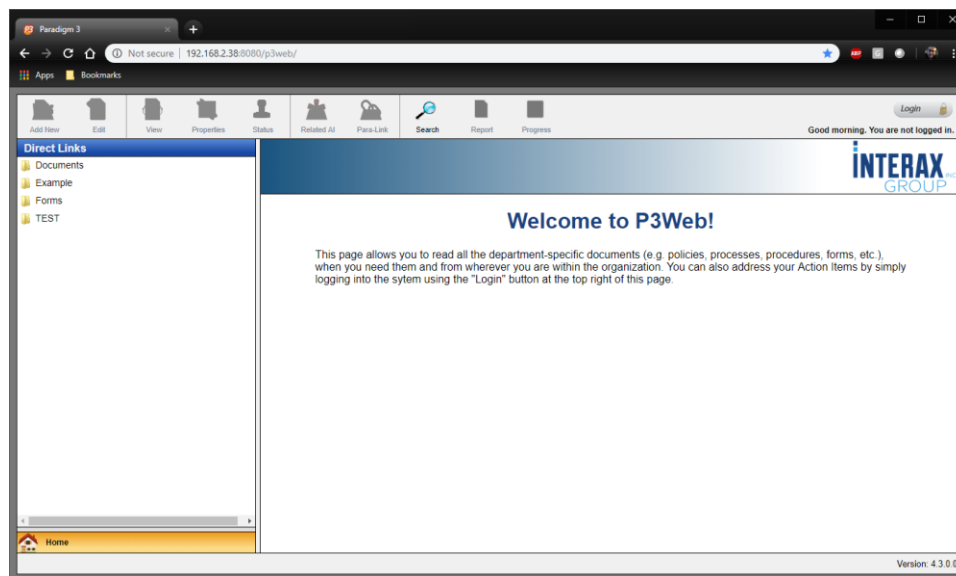

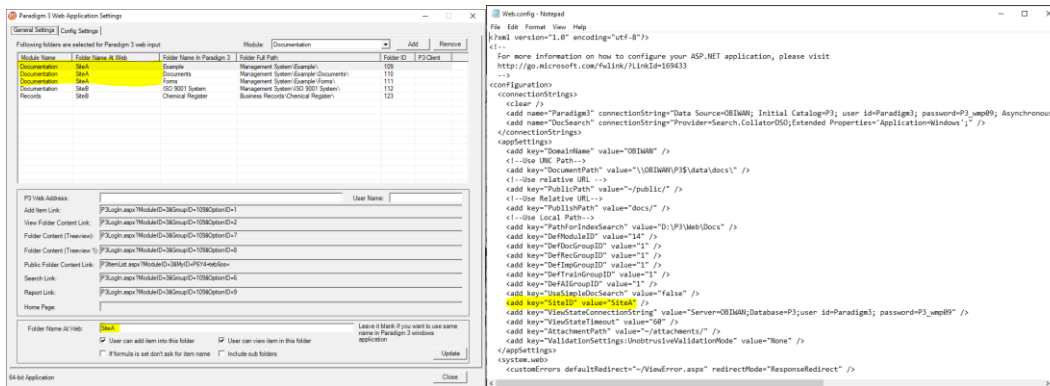

- Various performance and stability enhancements.

Home Page:

- Custom home pages are now stored in a separate file called "homepanel.html" and embedded into the appropriate panel on the P3Web home page. This will allow for custom home page settings and formatting to be unaffected by future upgrades to the P3Web application.
- Existing custom settings can simply be "pasted" into the new linked html page from your old "Default.aspx" page to be compliant with this version release.

Direct Links:

- Direct Links are now loaded directly from the "WebEnabledFolders" table in the Paradigm 3 database.
- The Web Enabled folders can be updated using the "P3WebAppCnf" program, located in the Program Files folder for the Paradigm 3 client.
- Direct links now hide the "System" folder from the view.
- Direct links are sorted alphabetically, by name.
- If your P3Web system is a multi-site installation, you can assign a unique value to the "Folder Name at Web" field in the P3WebAppCnf program and each site will only load the list of Direct Links applicable to them. This value must EXACTLY match the sites corresponding "SiteID" value from the "<appsettings>" section of the "web.config" file for that site:

- As a result of this enhancement, the names displayed for Direct Links in P3Web will now dynamically update when the associated folder in Paradigm 3 is renamed.

Documents Module:

- Stabilized the document status update function. An error that could occur when converting a document to current after checking it out has been rectified.
- Automatic repair of invalid "NULL" database values for documents where necessary.
- Administrator users can now cancel all checkouts.
- Insert field values are now updated when converting a document status to CURRENT.
- Item Date settings are now updated when making any status change.
- Improved search speed and performance.

Records/Improvements/Training:

- Para-Links window now opens correctly when clicked on items having Para-Links.
- Item List view updated for improved performance.
- Status Control Added for Records/Improvements/Training. Permitted users can now set items to "Complete" or open new records as "Draft" from completed records.
