## P3Web v4.4.3.0 Release Notes

2/13/2019

### Browser Compatibility:

- Internet Explorer 10+ (pop-ups must be permitted and compatibility mode must be set to "off")
- Google Chrome 34+ (pop-ups must be permitted for the application)
- Firefox 30+ (pop-ups must be permitted for the application)
- Edge 20+ (pop-up blocker must be "off")
- No mobile browser compatibility (Coming Soon!)

### Server Compatibility:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+

---

### General:

- Access to saved reports is now available for the Documents, Records, Improvements and Training modules. Clicking the "Report" button on the toolbar will produce a pop-up list of saved reports which the user can select. Reports will open in a new window.
- Various performance and stability enhancements.
- Windows based authentication performance and reliability has been improved.
- Corrected an error when sorting columns in the list view while not logged on.
- An issue when selecting items in the List View snapping back to the top of the list has been corrected. Scroll position should now be maintained after selecting an item.
- Edit/Status change capability now available for permitted Restricted+ users.
- When the session times out due to inactivity, the user is now more gracefully logged out and the application refreshes to the home page. Previously an error was being generated.

### Action Items:

- Clicking GO THERE from an Action Item to an item that is not located in a permitted folder now produces the same error message as in the client.

### Documents:

- All convert to current events are now supported by P3Web:
  - Convert to Current
  - Major Version Change
  - Medium Version Change
  - Minor Version Change
- Document Check-Out/Check-in performance and reliability has been improved.

- A potential DB error that could occur when returning documents for the List View has been rectified.

## **Training:**

- When adding a new Training record, the "Name" dropdown now correctly alerts when validation finds a name has not been selected from the list.

## **Search:**

- An issue when selecting items in the Search result list snapping back to the top of the list has been corrected. Scroll position should now be maintained after selecting an item.
- Clicking "Go There" on a selected item will now correctly calculate user security and not produce a security error if the user is permitted.
- Page alignment issues after clicking "Search" in IE have been corrected.
