
P3Web v4.8.0.0 Release Notes

4/10/2020

Browser Requirements:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to "off")
- Google Chrome 70+ (pop-ups must be permitted for the application)
- Firefox 70+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)
- Brave 1.4.95+ (pop-ups must be permitted for the application)
- Vivaldi 2.10+ (pop-ups must be permitted for the application)
- Opera 62+ (pop-ups must be permitted for the application)

Server Requirements:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+
- SQL Server 2008 R2+
- IIS 7+

General:

What's New?

- Import external items to Documents
- Naming and Labeling formulae are now supported in Documents, Records, & Training
- "Add Folder" now supported in all modules
- Role viewing and management now supported in all modules
- Add/Remove Para-Links now supported in all modules
- Para-Links to folders now supported in all modules
- Search result list view enhancements in all modules
- Mandatory Fields now supported in all modules
- Editable combo box support in Records, Improvements and Training
- General performance enhancements in all modules
- FIPS password encryption compliance now supported

Bug Fixes:

- Searching by Label Name now accurately returns results. It was previously matching to the "Name" field.
- The Initiator of an Improvement item is now correctly assigned as responsible for the initial step and appropriate Action Items are sent.
- Checked out documents are now deleted from the local PC when they are checked back in.

Known Issues:

- Closing the Document Viewer window using the "Windows Close" button can suppress the deletion code of the temporary view file. Use the P3Web "Close" button on the document toolbar instead to ensure proper removal of temporary view file.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version

General:

- Mandatory field functionality has been included in the Records, Improvements, and Training modules. If a mandatory field requires input, the record will not be saved until the requirement is met.
- Mandatory fields are now indicated with a red Asterix character (*)
- Changeable Combo Boxes are now supported in the Records, Improvements and Training modules.
- Adding folders to the folder tree is now supported in all modules. Added folders automatically inherit all parent folder settings when added from P3Web
- Import Name and Label formulae are now supported in the Documents, Records and Improvement modules. Currently supported wildcards are (?) and (*)

Documents:

- Permitted users can now import external files via P3Web without the need for an assigned default template. Items can be imported as the following statuses:
 - DRAFT
 - CURRENT
 - READY
 - REVIEW
 - EVIDENCE
- Users can import a single item or multiple items. Items can be imported by standard browsing or by dragging and dropping files into the upload control.
- Imported documents automatically inherit parent folder settings for roles, event dates and publishing
- Improved functionality of adding files from templates.
- File "Check Out" automatically copies the file to the "Downloads" Library on the local PC.
- File "Check In" will automatically upload the file from the "Downloads" Library of the local PC to the server. Files MUST be in the "Downloads" Library prior to checking it in.

Improvements:

- The Initiator of an Improvement item is now correctly assigned as responsible for the initial step and appropriate Action Items are sent.

Roles:

- Roles can now be viewed in Document and Group properties in Documents, Records, Improvements, and Training by permitted users. Roles are hidden from read-only access. Users must be authenticated to at least view roles.
- Permitted users can add or remove members for roles in items and folders in all modules.
- Role Settings can be applied to sub-items of a folder or all sub-folders and items. Only the selected role's members will be applied. Applied role members will overwrite the previous members at all levels for that role.

Para-Links:

- Para-Links can now be added and removed for items and folders in all modules.
- Para-Links to folders are now visible and can be accessed using the "Go There" button
- Only Administrators can add/remove Para-Links

Search:

- Search results now include the version number of the item in the item list view.
- Label-based searches now search the correct database column and no longer attempt to match results to the "Name" field.

Security:

- P3Web is now FIPS compliant. If FIPS compliance is enabled in the Paradigm 3 Power Tools, P3Web will respect the FIPS compliant encryption for user passwords on authentication.
