P3Web v4.10.0.0 Release Notes

3/5/2021

Recommended Browsers:

- Google Chrome 70+ (pop-ups must be permitted for the application)
- Firefox 70+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)

Supported Browsers:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to "off")
- Edge Legacy (pop-ups must be permitted and compatibility mode must be set to "off")

Server Requirements:

- .NET Framework v4.8
- Windows Server 2012
- SQL Server 2012
- IIS 10
- ** Microsoft JET Database Engine v12.0 (for external fields linked to MS Access) ** [optional]

General:

What's New?

- P3Web now is fully supported by .NET Framework 4.8.
- Event Dates can now be viewed and edited from the Properties dialog.
- Categories can now be viewed and edited from the Properties dialog.
- Improvements and Records can now be printed.
- Action Items that require password authentication are now supported.
- Digital Signature fields are now supported in Improvements, Records, and Training modules.
- External fields are now supported on a limited basis in Improvements, Records, and Training.
- Action Items can now be browsed using "Previous" and "Next" buttons from the Action Item window.

Bug Fixes:

- Security calculations for tree folder views have been further improved.
- An "ambiguous column name" error has been rectified when viewing saved searches.
- Attachments in Records, Improvements and Training have been updated to prevent missing file extensions on downloaded attachments.
- Removed File Name check for document check-ins as it was interfering with the posted file content. P3Web no longer confirms file names on check in.

Known Issues:

- Closing the Document Viewer window using the "Windows Close" button can suppress the deletion code of the temporary view file. Use the P3Web "Close" button on the document toolbar instead to ensure proper removal of temporary view file.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version.
- Using MS Interop to open files directly from the document repository will not convert internal Para-Links to hyperlinks. Para-Links can still be accessed using the "Para-Links" button on the Document Viewer toolbar.
- Certain field types are not yet supported in P3Web and others will not be supported in future versions. For a list supported/unsupported field types, contact Chris Reyno at creyno@interaxgrp.com.

General:

- Event Dates are now available for viewing or editing in P3Web and appear as a new tab in the Properties dialog! Restricted users can view Event Dates for an item/group, while Administrators and permitted Normal users can add/edit/remove Event Dates for an item/group. Changes can also be pushed to sub-groups and items from the folder level.
- Categories are now available for viewing or editing in P3Web and appear as a new tab in the Properties dialog! Restricted users can view Categories for an item/group, while Administrators and permitted Normal users can select/deselect Categories for an item/group. Changes can also be pushed to sub-groups and items from the folder level.
- Improvements and Records are now printable. Click the "Print" button in the item's toolbar to open a print page and dialog. Chrome will generate a preview, while all other browsers will allow previews via the print dialog.
- Events set to have their Action Items require password confirmation for completion are now supported by P3Web. A default comment stating, "Completed with password authentication [DateStamp]" will be added to the comment section.
- Digital Signature fields are now supported in Improvements, Records, and Training. A button will be available right of the field. Click the button to trigger a login prompt and update the field to show digital signature comment for user and a time stamp.
- External Field settings are now supported in Records, Improvements, & Training by P3Web. "Combo Box" and "Changeable Combo Box" field types will now populate from external lists stored in SQL, Access (MDB), Excel (XLSX), and CSV sources. The OLEDB Driver v12 is required for MS Access linked External fields. It can be downloaded here.

Action Items:

- "Next" and "Previous" buttons are now available on the Action Item toolbar to toggle through the list of available Action Items without having to close the Action Item window.
