P3Web v4.8.2.0 Release Notes

7/14/2020

Browser Requirements:

- Google Chrome 70+ (pop-ups must be permitted for the application)
- Firefox 70+ (pop-ups must be permitted for the application)
- Edge Chromium (pop-ups must be permitted for the application)
- Brave 1.4.95+ (pop-ups must be permitted for the application)
- Vivaldi 2.10+ (pop-ups must be permitted for the application)
- Opera 62+ (pop-ups must be permitted for the application)

Deprecated Browser:

- Internet Explorer 11 (pop-ups must be permitted and compatibility mode must be set to "off")

Server Requirements:

- MS .NET Framework v4.5
- Windows Server 2008 SP2+
- SQL Server 2008 R2+
- IIS 7+

General:

What's New?

- Now supports Windows access from a multi-domain environment.
- General Performance enhancements.

Bug Fixes:

- Direct links and direct folder access now allow the user to browse subfolders as intended.
- If the link to an Action Item SHOW ME item is broken, the system will now alert the user.
- Permissions now reflect P3 client for restricted users in Records and Improvement modules
- A condition that could cause fields to remain as read-only in the Records, Improvements, and Training modules has been avoided
- Date/Time format fields now correctly display the entire date/time string and not short date format in Records, Improvements, and Training modules

Known Issues:

- Closing the Document Viewer window using the "Windows Close" button can suppress the deletion code of the temporary view file. Use the P3Web "Close" button on the document toolbar instead to ensure proper removal of temporary view file.
- Saved Searches do not yet work for templates that require date inputs. This will be available in a future version
- Using MS Interop to open files directly from the document repository will not convert internal Para-Links to hyperlinks. Para-Links can still be accessed using the "Para-Links" button on the Document Viewer toolbar.

General:

- New application When using Windows Authentication, P3Web now supports access from multiple domains. Add all accepted domains to the web.config file setting called "DomainName", separated by commas.
- Direct Links now correctly calculate security for read-only users and populate sub-folders and items as expected.

Records, Improvements & Training:

- Restricted Users can now add new Items when default security is enabled in Records/Improvements
- Restricted Users can now edit items if permitted in Records/Improvements/Training
- A condition that could cause fields to remain as read-only in edit mode has been avoided in Records/Improvements/Training
- Date/Time field types now correctly display the full date and time as opposed to just the short date format
